

Shock absorber DYSW

FESTO

Characteristics

At a glance

Further information → [dysw](#)

- Hydraulic shock absorber with path-controlled flow control function
- Slowly increasing cushioning force curve
- Long cushioning stroke
- Suitable for low-vibration operation
- Short cycle times possible
- Maintenance-free
- Metal end position on the housing
- Continuous mounting thread with internal hex

Diagrams

Further information → [dysw](#)

The diagrams shown in this document are also available online. These can be used to display precise values.

Geometric characteristics

[Y1] Internal hex

The shock absorber can be adjusted using the hexagon socket

Stop

[F] With fixed stop

Metal end position on the shock absorber housing

Type code

001	Series	
DYSW	Shock absorber	

002	Size	
4	4 mm	
5	5 mm	
7	7 mm	
8	8 mm	
10	10 mm	
12	12 mm	

003	Stroke [mm]	
6	6	
8	8	
10	10	
14	14	
17	17	
20	20	

004	Geometric characteristics	
Y1	Internal hex	

005	Stop	
F	With fixed stop	

Datasheet

General technical data

Size	4	5	7	8	10	12
Stroke	6 mm	8 mm	10 mm	14 mm	17 mm	20 mm
Mode of operation	Single-acting, Pushing					
Cushioning	Self-adjusting, Soft characteristic curve					
Cushioning length	6 mm	8 mm	10 mm	14 mm	17 mm	20 mm
Type of mounting	Via lock nut					
Max. impact speed	2 m/s		3 m/s			
Mounting position	optional					
Ambient temperature	-10 ... 80°C					
Corrosion resistance class CRC ¹⁾	2 - Moderate corrosion stress					

1) More information www.festo.com/x/topic/kbk

Reset time

Size	4	5	7	8	10	12
Reset time at room temperature ¹⁾	0.2 s					0.3 s

1) At higher temperatures (+80 °C) the max. mass and the cushioning energy must be reduced by approx. 50%.

At low temperatures (-10 °C), the reset time may be up to 1 second.

Forces

Size	4	5	7	8	10	12
Min. insertion force ¹⁾	6.5 N	7.5 N	10 N	18 N	25 N	35 N
Max. stop force ²⁾	100 N	200 N	300 N	500 N	700 N	1,000 N
Reset force ³⁾	0.7 N	0.9 N	1.2 N	2.5 N	3.5 N	5 N

1) This is the minimum force that must be applied so that the shock absorber is pushed precisely into the retracted end position. This value is reduced accordingly with an extended external end position.

2) If the maximum stop force is exceeded, a fixed stop (e.g. YSRA) must be fitted 0.5 mm before the end of the stroke.

3) This is the maximum force that can act on the piston rod so that the shock absorber still extends completely (e.g. upstream bolt).

Energy

Size	4	5	7	8	10	12
Max. energy consumption per stroke	0.8 J	1.3 J	2.5 J	4 J	8 J	12 J
Max. energy consumption per hour	7,000 J	10,000 J	15,000 J	21,000 J	30,000 J	41,000 J
Max. residual energy	0.006 J	0.01 J		0.02 J	0.03 J	0.05 J

Mass range

Size	4	5	7	8	10	12
Mass range	1.2 kg	2 kg	5 kg	10 kg	20 kg	30 kg

Weight

Size	4	5	7	8	10	12
Product weight	6 g	11 g	21 g	42 g	67 g	91 g

Materials

Materials						
Size	4	5	7	8	10	12
Material piston rod	High-alloy steel					
Material housing	High-alloy steel				Galvanised steel	
Material seals	NBR					
Note on materials	RoHS-compliant					
LABS (PWIS) conformity	VDMA24364-B2-L
